

Leading in the 5G era - video transcript.

Scotland are you ready?

A nation of inventors

A nation of innovators

A nation of pioneers

Fearless creativity

Global connections

Makes Scotland the perfect place for 5G test beds, projects, investments

We're building, powering, accelerating, supporting, Scotland's 5G community

We're supercharging Scotland's 5G community

We're getting ready for a 5G future

Are you?

Sarah Enyon, Scotland Futures Trust "The Scotland 5G Centre is a national visible platform to create an area for collaboration, innovation and knowledge sharing. 5G is anytime, anywhere, on any device. It also brings a new layer of capabilities, greater speeds, greater capacity, and more energy efficiency.

Charlie Swan, Nokia "I see the 5G Centre in Scotland as being a great centre of excellence where people can access that expertise and bring it into their organisations. This is an opportunity for Scotland to start to lead the world again.

Emma Cadzow, Illuminate Technologies "Really the 5G centre is providing a space for us to collaborate, to work on real world problems, things that are of genuine importance for the Scottish community.

Paul Wheelhouse MSP, Scottish Government Minister for Energy, Connectivity & the Islands "Cities like Glasgow and Edinburgh are really embracing the 5G revolution. The Scotland 5G Centre is designed to help Scotland to really springboard Scotland to be at the forefront of this new digital revolution.

Colin Cook, Scottish Government "Scotland has some significant advantages in 5G, we have academics, businesses and government all wanting to partner in order to promote our industry. I think my real excitement in 5G comes in healthcare, it can be a complete game changer for the way healthcare is delivered.

Alison Wheatley, Vodafone ""For example at Vodafone we had the first connected ambulance. It means that when you are getting the ambulance you don't have to wait until you reach the hospital before you are being diagnosed, or before tests can be run. So your healthcare starts the second you are collected by the ambulance.

Alan Less, BT "BTs ambition for 5G is probably unlimited, we want to be the driving force of 5G enabling businesses, consumers and organisations to transform their daily lives."

Malcolm Brew, University of Strathclyde "The 5G Centre is a catalyst for taking the innovation that comes out of labs out into a living lab, to help monitor renewable energy, better healthcare, or at home or in places where basically there have been no networks.

Professor Muhammad Imran, University of Glasgow "The 5G testbed is a real enabler to derisk any innovation that small and medium sized enterprises want to do. It provides them a derisk environment where they can do mistakes. They can bring down the network and improve their solutions"

"I wan to make sure that the 5G Centre in Scotland gets access to Nokias latest technology first.

Sarah Enyon "The Scotland 5G Centre is ready for a 5G future.
